# Most Agencies Ship With Risk Baked In.

Software agencies build great products — but without dedicated QA, bugs slip through. Every release carries risk that clients eventually find. The data confirms it.

of bugs caused by developers testing their own code

Bias blindness — NIST Research

of businesses outsource to reduce risk and cost

Deloitte Global Outsourcing Survey

of B2B decision-makers delegate key tasks to third parties

YouGov Business Survey

### ✘ Developers Can't Test Their Own Code

Bias blindness is real. They see what they built — not what's broken. Edge cases and integration failures slip through every time.

### ✘ Bugs Found by Clients

When clients discover bugs in production, agency trust is damaged. Emergency fixes, weekend calls, and reputation loss follow.

### ✘ Hiring a QA Engineer is Expensive

A US-based QA engineer costs \$130K–\$184K per year including salary, benefits, and taxes. Not viable for every project.

### ✘ Freelancers Are Unreliable

Disappear mid-project. No documentation. No accountability. No handoff. Zero structured process. The agency pays twice.

The result — agencies ship every release hoping nothing breaks. QAForge ends that cycle.

# We Do One Thing. We Test Software.

QAForge is a Pakistan-based software quality assurance company built exclusively to serve software development agencies worldwide. We don't build software. We don't consult. We don't upsell. We test — with structure, documentation, and accountability.

*Our mission is to make sure your clients never find a bug that we should have caught first.*

### QA-Only Focus

No conflicts, no distractions. Pure testing expertise. We live and breathe software quality.

### Dedicated Teams

Same engineers every month. They learn your codebase, your clients, your standards.

### Structured Process

Test plans, test cases, documented evidence. Not random clicking — repeatable methodology.

### Weekly Reports

Every Friday — what was tested, bugs found, pass rates, blockers. Full transparency.

### Worldwide Service

US, UK, Canada, Australia, Europe and beyond. Overlapping timezones for fast collaboration.

### Fast Start

Testing begins within one week — not three to six months of recruiting and onboarding.

# Ten Testing Disciplines. One Focused Team.

Complete coverage for web applications, SaaS platforms, APIs, and mobile apps — all delivered in your existing tools with zero workflow disruption.

**01 Functional Testing**  
Features, workflows, forms, business logic, edge cases, negative scenarios.

**02 API Testing**  
REST & SOAP validation, authentication, payloads, error handling via Postman.

**03 Regression Testing**  
Full re-test before every release. Nothing breaks silently between sprints.

**04 Cross-Browser & Device Testing**  
Chrome, Safari, Firefox, Edge — desktop and mobile. Consistent everywhere.

**05 Performance Testing**  
Load times, API response speeds, bottlenecks, and scalability under traffic.

**06 Security Testing**  
Access control, injection vulnerabilities, data exposure, permission enforcement.

**07 Integration Testing**  
Payment gateways, CRMs, webhooks, email services, third-party API connections.

**08 Mobile App Testing**  
iOS and Android native and hybrid apps across devices, OS versions, screen sizes.

**09 Bug Documentation**  
Reproduction steps, screenshots, severity levels, fix recommendations. Actionable.

**10 Test Case Library**  
Structured documentation your team owns permanently. Repeatable across releases.

We work in **your tools** — Jira · Linear · Notion · GitHub Issues · TestRail · ClickUp · Asana · Trello · Monday.com — no switching required.

# Your QA Team. Running in One Week.

No lengthy onboarding. No setup delays. We integrate into your workflow immediately and start delivering value from day one.

- 1** **WEEK 1**  
**Discovery & Onboarding**

We learn your tech stack, tools, client requirements, and priorities. Access granted to staging environment, codebase, and issue tracker. Scope and success criteria defined.
- 2** **WEEK 1-2**  
**Test Planning**

We write comprehensive test cases for every feature. You review and approve before a single test runs. No surprises.
- 3** **ONGOING**  
**Test Execution & Bug Reporting**

Functional, regression, API, and compatibility tests executed on schedule. Every bug logged instantly with reproduction steps, screenshot, severity, and fix recommendation.
- 4** **BEFORE EVERY RELEASE**  
**Regression Pass & Go/No-Go**

Full regression run before every deployment. We confirm nothing broke. Final go/no-go recommendation given.
- 5** **EVERY FRIDAY**  
**Weekly QA Report Delivered**

Professional PDF report in your inbox every Friday — tests run, bugs found, pass rate, blockers, risks, and next week's plan.

 **What Arrives in Your Inbox Every Friday**

- Bug count by severity
- Pass rate %
- Blockers flagged
- Features covered
- Next sprint plan
- Fix priority guidance

# Real Bugs Stopped. Real Clients Protected.

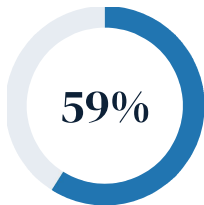

These are real projects we have tested. Client names are anonymized. The bugs, the results, and the numbers are real.

<p><b>SalesStrat — CRM Platform</b> React · Node.js · iOS · Android</p> <p>300+ test cases across 3 platforms · 4 months</p> <p><b>Found:</b> API authentication failing 30–40% of requests — silent data loss in CRM sync</p> <p><b>Result:</b> Zero critical bugs in production for 18+ months. Client renewed QA retainer.</p>	<p><b>Zelzu — Multi-Vendor Marketplace</b> MERN Stack · Stripe · AWS</p> <p>400+ test cases across Admin, Seller, Customer portals · 3 months</p> <p><b>Found:</b> Stripe payment failing on Safari — 15–20% of all users affected. Caught before launch.</p> <p><b>Result:</b> Black Friday campaign — 2,000+ transactions with zero payment failures.</p>
<p><b>Church Management SaaS</b> React · Node.js · PostgreSQL · Computer Vision AI</p> <p>26 bugs in 5-day audit: 3 critical, 6 high, 11 medium · Ongoing retainer</p> <p><b>Found:</b> Camera check-in crashing on Android devices — caught one week before client demo</p> <p><b>Result:</b> 50+ churches using platform daily. Zero production incidents post-launch.</p>	<p><b>ProEssay — Writing Platform</b> MERN Stack · Socket.io · Stripe</p> <p>Complex multi-factor pricing engine · Real-time chat · 2 months</p> <p><b>Found:</b> Pricing calculation returning wrong amounts on bundled orders — revenue risk</p> <p><b>Result:</b> 500+ orders in first month. Zero billing disputes. Zero revenue loss.</p>

<p><b>30+</b> PROJECTS TESTED</p>	<p><b>500+</b> BUGS CAUGHT</p>	<p><b>0</b> CRITICAL BUGS REACHED PRODUCTION</p>

# The Data Confirms What Agencies Already Know.

QA is not a nice-to-have. The numbers from global research organizations show exactly what is at stake when agencies skip structured testing.

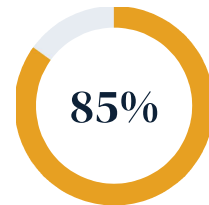

Organizations outsource to reduce operational cost and risk

— Deloitte Global Outsourcing Survey

B2B decision-makers delegate key tasks to trusted third parties

— YouGov Business Survey

Post-release bugs traced to inadequate pre-release testing

— NIST Software Research

*Shipping without QA is not saving time. It is borrowing time from your next sprint to pay for bugs your client will find first.*

— QAForge Testing Principle

*The cost of fixing a bug in production is 6 times higher than fixing it before release. Prevention is the only sustainable QA strategy.*

— IBM Systems Sciences Institute

The global software testing market is projected to reach **\$60 billion by 2027**. Agencies that invest in structured QA now retain clients **3x longer** than those that don't.

# Transparent Pricing. No Hourly Billing. No Surprises.

Fixed monthly retainers. You know exactly what you pay. We focus on quality — not counting hours.

**STARTER**

**\$2,500** / month

1 Dedicated QA Tester  
80 hours per month

- ✓ Functional & regression testing
- ✓ Bug documentation with screenshots
- ✓ Test case development
- ✓ Weekly QA report (every Friday)
- ✓ Email & Slack support
- ✓ Testing in your preferred tool

**Best for:** Agencies with 1–2 active client projects

**GROWTH** MOST POPULAR

**\$4,500** / month

2 Dedicated QA Testers  
160 hours per month

- ✓ Everything in Starter
- ✓ API testing (REST & SOAP)
- ✓ Cross-browser & device testing
- ✓ Full test case library maintained
- ✓ Bi-weekly video review calls
- ✓ Performance testing included

**Best for:** Growing agencies with 3–5 active projects

**SCALE**

**\$7,000** / month

Full QA Team + Team Lead  
240+ hours per month

- ✓ Everything in Growth
- ✓ Dedicated team lead oversight
- ✓ Security & penetration testing
- ✓ Load and stress testing
- ✓ Priority 4-hour response
- ✓ CI/CD pipeline integration

**Best for:** Established agencies with 6+ projects

**CUSTOM**

**Let's Talk**

Tailored to Your Requirements  
Any team size · Any hours · Any project type

- ✓ Any combination of services
- ✓ Part-time, full-time, or burst capacity
- ✓ Sprint-based or continuous engagement
- ✓ Startup to enterprise — we scale with you
- ✓ One-time audits available
- ✓ Built entirely around your workflow

**Best for:** Unique requirements, any company size

### Flexible Engagement — You Are Always in Control

Month-to-month

Scale up or down anytime

No lock-in contracts

30-day satisfaction guarantee

Cancel anytime — no penalties

A dedicated US QA engineer costs **\$130K–\$184K per year** all-in (salary + benefits + taxes + recruitment). QAForge gives you a structured QA function — not just one person — **starting at \$2,500/month**.

# Not Ready to Commit? Start With Zero Risk.

Every client we have ever worked with started with a free audit. The report speaks for itself.

## Free 5-Day QA Audit

We test one module or feature of your project for 5 full business days — completely free. Monday we start. Friday you receive your professional audit report.

- Full bug report with severity levels
- Documented test cases for your team
- Fix recommendations and priority guidance
- Final quality summary — PDF delivered

Zero Cost

Zero Contract

Zero Pressure

Pure Value

### ✔ If You Like Our Work

We move to a monthly retainer and continue where the audit left off. Your team, your tools, your workflow — already established.

### 📄 If You Don't

Keep the audit report with our compliments. No hard feelings. You still got real QA value — bugs identified, documented, and ready to fix.
